

MEMO-02: TI Classification Guidelines

Source: <https://scribe.rip/@pragroup/memo-02-ti-classification-guidelines-9f12d0dc831f>

Archibald Ludendorf

At PRAG we use the following classification to assign status codes for targeted individuals in our database. It allows us to quickly gain understanding of the situation and to have a desired selection of people for certain research.

Universal adoption of such coding system will allow TIs to communicate their situation better to other community members and researchers without explaining their story extensively each time.

Classes

- Class G: Gangstalking subjects
- Class V: Voices subjects
- Class GV: Gangstalking + Voices
- Class S: People likely persecuted by known organization (like CIA etc)
- Class P: People likely stalked by private person (i.e. ex)
- Class F: fraud/prankster

Conditions (numbers increase with severity)

- *0: complete recovery* (back to normal)
- *1: remission* (partial recovery, episodically harassed)
- *2: acceptable coexistence* (harassment usually isn't the center of attention)
- *3: irritating coexistence* (constantly reminded of harassment)
- *4: heavily burdening presence* (everything is about harassment)
- *5: dysfunctional presence* (unable to reliably function)

- 6: *active psychosis 1* (sleep deprivation, obsessive ideas)
- 7: *active psychosis 2* (actively seeking retaliation)
- 8: *active psychosis 3* (despair, pre-suicidal)
- 9: *death*

Duration

Duration is marked in such a way: *+ [number of years]*

For example, 3 year experience would be +3

Usage

Gangstalking victim with 3 years of experience, currently mildly harassed, would have status **G3+3**.

GV0+5 is someone who experienced phenomenon for 5 years some time ago, both voices and gangstalking, but does not experience it anymore.

Classes S, P and F could not be self-appointed and only appointed by experienced analysts with a lot of cases behind their backs.

With time, statuses are revised and changed to better reflect current condition of TI.

This practice should bring us standardization to ease further research and solutions.

Thank you for the reading. You're welcome to leave your own TI status in comments!
